

**Intelligent Motor Control Centers (IMCC)
and Motor Control Centers (MCC) Compared to
Intelligent Motor Control (IMC) and Motor Controllers
(MC) with Variable Voltage Drive (VVD) Capabilities
as provided by Owl Energy Technologies**

<p>Intelligent Motor Control Centers and Motor Control Centers are basically just familiar motor control components in a common enclosure. See note one.</p> <p>They could be more accurately designated as Intelligent Motors Control Centers and Motors Control Centers.</p>	<p>Intelligent Motor Controllers or Motor Controllers with Variable Voltage Drive (VVD) Capabilities as provided by Owl Energy Technologies:</p> <p>Match actual load to motor usage thus reducing electricity used and lowering costs.</p>
<p>Schneider-Electric describes their Model 6 intelligent Motor Control Centers (iMCCs) - Integrated intelligent components and device-level networks provides improved performance to enhance any process or production method.</p> <p>It offers a total solution package with "intelligent" components and cabling solutions.</p> <p>The Model 6 iMCC reduces installation time and costs by replacing large bundles of field-control wiring with either pre-wired I/O or networking technology. Total installed cost-savings generally average 10% to 30%.</p> <p>See Note two.</p>	<p>Examples includes compressors, plastic injection molding machines, presses and more</p> <p>For commercial and industrial fixed speed alternation current motors</p> <p>Owl Energy Intelligent Motor Controllers provide:</p> <ul style="list-style-type: none"> • Start-up spike reduction, soft start and soft-stop capability And provide Energy Optimization • Lower KWh, Demand, KW and KVAR • Can be applied to motors without regard to their age or insulation class • Perfect for retrofit, • Improve payback for NEMA efficient motors • Significantly reduces the motor heat and as a result, increases the life of the motor • Proven technology in use in thousands of installations worldwide
